```
were used as a driver for normalization. Hybridization between the single-stranded library and the PCR products was carried out for 4 hours at 30c. Unhybridized single-stranded DNA circles were separated from hybridized DNA rendered partially double-stranded and electroporated into DHIOB cells to generate the normalized library. The total number of clones with insert was 9x10°6 cfu. Background of empty clones was less than 1%."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                632 bp mRNA linear EST 05-AUG-2003 cDNA library from cambial zone Populus alba 5', mRNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Populus alba x Populus tremula

Hubner (forest tent caterpillar) mid-instar larvae caged on the sapling using mesh bags. Mature leaves from within the caged regalon were collected 2 hours, 12 hours, 24 hours, 24 hours and 48 hours after the onset of treatment. mRNA was isolated from each tissue source independently and equal quantities of mRNA from each tissue were then pooled. CDNA was prepared from 5 micrograms of mRNA and directionally ligated into the pBluescript II SK (+) XR vector using the pBluescript II XR cDNA library Construction Kit according to manufacturer's instructions with modifications (Stratagene). Plasmid DNA was then transformed by electroporation into DH108 cells (Invitrogen) for

/clone lib="PTxD-IL-N-A-9"
/note="Weator: pBluescript II SK (+) XR; Site 1: EcoRI (5'
end of cDNA); Site 2: Xhoi (3' end of cDNA); Sapling trees
two metres in height and grown under greenhouse conditions
were exposed to continuous feeding by Malacosoma disstria
Hubner (forest tent caterpillar) mid-instar larvae caged
on the sapling using mesh bags. Mature leaves from within
the caged region were collected 2 hours, 12 hours, 24
hours and 48 hours after the onset of treatment. mRNA was
isolated from each tissue source independently and equal
quantities of mRNA from each tissue were then pooled. cDNA
was prepared from S micrograms of mRNA and directionally
ligated into the pBluescript II SK (+) XR vector using the
pBluescript II XR ONNA tibrary Construction Kit according
to manufacturer's instructions with modificants.

/Jobe = 11b="PT-DX-N-A-10"
/Jobe = 12b="Vector: pBluescript I1 SK (+) XR; Site 1: EcoRI (5')
end of cDNA); Site = 2: XhoI (3' end of cDNA); Outer xylem
from 5 year old trees harvested every two weeks between
April and October of 2002 at the University of British
Columbia south campus farm in Vancouver. British Columbia
and equal quantities of mRNA from each tissue were then
pooled. cDNA was prepared from 5 micrograms of mRNA and
directionally ligated into the pBluescript I1 SK (+) XR
vector using the pBluescript II XR cDNA Library
Construction Kit according to manufacturer's instructions
with modifications (Stratagene). Plasmid DNA was then
transformed by electroporation into DH10B cells.
// Town town of the correspondence of the columbiant transformed by electroporation into DH10B cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (Invitrogen) for propagation. Normalization was applied according to published methods (Bonaldo M.F. et al. (1996) Genome Research 6(9):791] in order to reduce the abundance of highly expressed transcripts."

end of cDNA); Site 2: Xhol (3' end of CDNA); Outer xylem
from 5 year old trees harvested every two weeks between
April and October of 2002 at the University of British
Columbia south campus farm in vancouver. British Columbia.
mRNA was isolated from each tissue source independently
and equal quantities of mRNA from each tissue were then
pooled. cDNA was prepared from 5 micrograms of mRNA and
directionally ligated into the pBluescript I1 SK CDNA Library
Construction Kit according to manufacturer's instructions
with modifications (Stratagane). Plasmid DNA was then
transformed by electropostation into DH10B cells
Populus trichocarpa (Populus balsamifera subsp. trichocarpa)
Populus trichocarpa

                                                                                                                                                                                                                                                                                 This invention relates to a novel plant transcription factor polypeptides, the DNA sequences which encode them and their use in creating transgenic plants. The transgenic plant and methods are useful for producing commercially or agriculturally useful plants having improved tolerance to drought, shade and low nitrogen conditions when compared to wild-type reference plants. The present sequence is that of plant transcription factor gene which was used during the development of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GCTGTCGGAGGGAAAACTGTAGAAGAAGTGAAGCGCCACTATGACATTCTCGTCGAGGAT

                                                                                                                                                                                                                                                                                                          ö
                                         The invention relates to a transgenic plant that possesses a plant transformation vector comprising a nucleotide sequence that encodes a peronospora parasitica resistant (FPR2) protein, or a PPR2 orthologue. The transgenic plant is useful in generating plants with a pathogen resistance phenotype. The PPR2 nucleic acids and proteins of the invention are useful in the generation of genetically modified plants having a modified pathogen resistance phenotype. The present DNA sequence encodes an Arabidopsis thaliana PPR2 protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention relates to novel isolated plant nucleic acid molecules, or variants thereof, that encode transcription factors. Specifically, it refers to transcription factor proteins that are capable of binding to DNA in order to regulate gene transcription and gene expression in a plants, in particular Eucalyptus grandis and pinus radiata. The present invention describes DNA constructs containing DNA encoding a transcription factor that regulates the promoter, which is operably linked to the desired nucleic acid to be expressed. It further provides transgenic plants expressing a transcription factor that confers a trait to the plant such as increased drought, salt or disease tolerance, height nutritional characteristics, as well as improved taste, starch composition, flower longevity and germination, amongst others.

Accordingly, such plants that are successfully transfected with a DNA

construct can be characterized by a difference in flower color, petal or leaf shape and size, aroma or plant height. This polynucleotide is a plant transcription factor cDNA sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a recombinant polynucleotide comprising any of the 58798 Cotton plant cDNA sequences mentioned in the specification. Also a recombinant polypeptide comprising any of the 58798 amino acid sequences mentioned in the specification and producing a plant having an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Cotton, 88; plant, cold tolerance; growth rate; cell cycle pathway; drought tolerance; plant disease resistance; galactomannan; lignin; plant growth regulator; heat tolerance; herbicide tolerance; homologous recombination; extreme osmotic condition tolerance; pathogen resistance; pest resistance; yield; photosynthesis; seed oil;

comprises transforming a plant having an improved property
comprises transforming a plant with a recombinant construct comprising a
promoter region functional in a plant cell operably joined to a
promoter region functional in a plant cell operably joined to a
polynucleotide comprising a coding sequence for a polypeptide associated
with the property, and growing the transformed plant. The polypeptide is
compared to a plant cold tolerance, manipulating growth rate in
plant cells by modification of the cell cycle pathway, improving plant
corpushing galactomannan for lighin or plant growth regulators, improving
plant theat tolerance, improving plant tolerance to plant disease,
corpushing plant conditions or lighin or plants, improving plant tolerance
the rate of homologous recombination in plants, improving plant tolerance
corpustions are and/or uptable with a plants, improving plant tolerance
corpusphorus use and/or uptable, or improving yield by modification of photosynthesis, or improving yield by providing improved
corpusphorus use and/or uptable, or improving yield by providing improved
corpusphorus use and/or uptable, or improving yield by providing improved
corpusphorus use and/or uptable, or improving yield by providing improved
corpusphorus use and/or uptable at least one stress condition. The
polynucleotide and polypeptide may also be used in recombinant DNA
content plant connet form plant connection. NOTE: The sequence data for this
corpusphorus tolerance the printed specification, but was obtained
in all polynomic formar directly from IRDPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         138 CATGGACAGCCAAGCAAACAAAGATTTCGAAAGGGCTTTAGCTGTTTACGACAAGGACA 197

The invention relates to 17880 cotton expressed sequence tags (ESTS;

ACN45220-ACN63099). The ESTS were isolated from CDNA libraries generated

Erom primed or non-primed seeds from variety DBFS0B, mature seeds from

variety Coker 312 Boswell 96 Field, and androecium tissue, gynoecium

tissue, developing fibree, carpel walls and septa from variety

C tissue, developing fibree, carpel walls and septa from variety

Nucotton33B. The invention also relates to substantially purified

proteins or their fragments encoded by nucleic acid molecules of the

invention, and to transformed plants having a nucleic acid construct

comprising a nucleic acid of the invention. The cotton ESTs are useful

comprising a nucleic acid of the invention. The cotton ESTs are useful

comprising a nucleic acid of the invention. The cotton ESTs are useful

comprising a nucleic acid of the invention. The cotton ESTs are useful as

consistent gene function and to determining whether genes

consistent genes function and to determining whether genes

associated with plant growth, quality, yield, and could also serve as

links in metabolic and catabolic pathways. The nucleic acid molecules are

also useful for identifying genes important in initiating and maintaining

ceed germination or the may be used to mitigate stresses encountered

during seed germination. The ESTs additionally enable the acquisition of

promoters and cis-regulatory elements which will be useful to express

cand also permits the acquisition of molecular markers useful in breeding

cand also permits the acquisition of molecular markers useful in breeding

significant genes. The nucleic acid molecules are further useful for

and also permits the acquisition of molecules markers useful in breeding

cathemes, genetic and molecular mapping, and in cloning of agronomically

cathemes and cather or and molecules and molecules are further useful to express
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cotton variety Nucotton33B gynoecium tissue cDNA library (LIB3829). The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format directly from the US patent office at seqdata.uspto.gov/sequence.html?DocID=US20040123340
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               505 CATGGACAGCCAAGCAAACAAAGATTTCGAAAGGGCTTTAGCTGTTTACGACAAGGACA 446

The invention relates to a recombinant polynucleotide comprising any of the 58798 Cotton plant cDNA sequences mentioned in the specification.

Also a recombinant polypeptide comprising any of the 58798 amino acid sequences mentioned in the specification and producing a plant having an improved property.

Comprises transforming a plant with a recombinant construct comprising a promoter region functional in a plant call operably joined to a promoter region functional in a plant call operably joined to a promoterry, and growing the transformed plant. The polypeptide is could be improving plant cold tolerance for a polypeptide associated useful for improving plant cold tolerance, manipulating growth rate in plant tolerance, providing increased resistance to plant disease, producing galactomannan (or lignin or plant growth regulators), improving plant tolerance to improving plant tolerance to producing galactomannan (or lignin or plant growth regulators), improving plant tolerance to methodicides, increasing conducing galactomannan (or lignin or plants; improving plant tolerance to extreme commologue recombination in plants; improving plant folerance to extreme commologue recombination in plants; improving plant colerance to extreme commologue, improving yield by modification of such pathogens or pests, improving yield content, improving yield by modification of extrance improving yield by modification of extrance improving yield or improved to extrance for content, improving yield by modification of extrancy improved imp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 or phosphorus use and/or uptake, or improving yield by providing improved plant growth and development under at least one stress condition. The polymucleotide and polypeptide may also be used in recombinant DNA constructs, in physical arrays of molecules, as plant breeding markers, or in computer based storage and analysis systems. The present sequence is a Cotton plant cDNA of the invention. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New recombinant nucleic acid molecules and polypeptides from Gossypium hirsutum, useful for producing plants with improved biological characteristics (e.g. improved plant cold or drought tolerance).
                                                                                                                                                                                                                                 Cotton; ss; plant; cold tolerance; growth rate; cell cycle pathway; drought tolerance; plant disease resistance; galactomannan; lignin; plant growth regulator; heat tolerance; herbicide tolerance; homologous recombination; extreme osmotic condition tolerance; pathogen resistance; pest resistance; yield; photosynthesis; seed oil;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 segdata.uspto.gov/sequence.html?DocID=20040181810. However only 6585 polynucleotide sequences were available, the remaining 52213 polynucleotides and all 58798 protein sequences were not present.

plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme semetic conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, lignin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one stress condition or for modifiying seed oil or protein yield and/or content. This sequence represents a plant full length insert polynucleotide that can be used in the recombinant DNA construct of the

The invention relates to plant nucleotide sequences that direct seed, claff and/or stem-, panicle-, root- or pollen-specific or -preferential or constitutive transcription of an operatively linked nucleic acid segment. The invention also relates to a method for augmenting a plant consecription of an enthod for augmenting a plant consecription is a cereal, pollen, root or is constitutive in a plant cell. The plant is a cereal, e.g. soybean, alfalfa, sunflower, canola, cotton, peanut, tobacco or sugar beet, preferably maize, barley, concode are useful for manipulating crop plants to alter or improve proteins, to incur resistance to insecticides, viruses or fungi, and to proteins, to incur resistance to insecticides, viruses or fungi, and to proteins, to incur resistance to insecticides, viruses or fungi, and to incur stress tolerance (e.g. salt, cold or drought) to ensure the plants have a high nutritional value with reduced apical dominance or dwarfism, early flowering or altered metabolic pathways. This sequence represents a plant with an expension of the invention, or early flowering or altered metabolic pathways. This sequence represents a plant with a sequence date for this incur in the control or drought to a control or drought.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          288

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       18-JUN-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       18-JUN-1
     and polypeptides. Also disclosed are vectors, expression cassettes, host cells, and plants containing such polynucleotides. Also disclosed are methods for using the polynucleotides and polypeptides to alter the methods for using the polynucleotides and polypeptides to alter the responsiveness of a plant to abiotic stress. The invention is useful in agriculture. The nucleic acid is useful for determining whether a test plant has been exposed to an abiotic stress condition. It is also useful for selecting an agent that alters abiotic stress regulated polynucleotide expression in a plant cell, and to identify a homolog or ortholog to an abiotic stress responsive polynucleotide. The nucleic acid molecule and the polypeptide encoded by it are useful in altering the stress, osmotic stress or any of their combinations. The present sequence is used in the exemplification of the invention
                                                                                                                                                                                                                                     New stress-responsive nucleic acid, useful for altering the responsiveness of a plant, e.g. cereal, to an abiotic stress such as cold stress, salt stress or osmotic stress.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       476 crccrccrdeacceceaageagaacaacaacarcrccaagaagecacreecegreraceacag 417

The invention relates to 17880 cotton expressed sequence tags (ESTS;

ACN45220-ACN63099). The ESTS were isolated from CDNA libraries generated
from primed or non-primed seeds from variety DPSOB, mature seeds from
variety Coker 112 Boswell 96 Field, and androecium tissue, gynoecium
tissue, developing fibres, carpel walls and septa from variety
CC transformed seeds from valiety procing
CC seed for the invention also relates to substantially purified
proteins or their fragments encoded by nucleic acid molecules of the
invention, and to transformed plants having a nucleic acid construct
CC comprising a nucleic acid of the invention. The cotton ESTS are useful as
molecular tags to isolate genetic regions, to isolate genes to meders, to determine gene function and to determining whether genes are
CC determine gene function and to determining whether genes are
CC seed for isolate genetic regions, to isolate genes are
CC seed for isolate gene family. The nucleic acid molecules may be
used for isolating a variety of agronomically significant genes
cc associated with plant growth, quality, yield, and could also serve as
Inks in metabolic and catabolic pathways. The nucleic acid molecules are
clinks in metabolic and catabolic pathways. The nucleic acid molecules
cc associated with plant growth, quality, yield, and could also serve as
clinks in metabolic and catabolic pathways. The nucleic acid molecules
cc associated with plant growth, quality, yield, and could also serve as
clinks in metabolic and catabolic pathways and could also serve as
cc agronomically significant genes important in initiating and maintaining
cs edd germination or that may be used to mitigate stresses encountered
cc during seed germination. The ESTs additionally enable the acquisition of
cs promoters and cis-regulatory elements which will be useful for
cc detecting the expression level or pattern of a protein or mRNA and for
detecting the expression level or pattern of a protein or mRNA and for
cc detecting the expression level or pattern of a protei

ACW45220-ACN63099). The ESTS were isolated from cDNA libraries generated from primed or non-primed seeds from variety DPSOB, mature seeds from variety Coker 312 Boswell 96 Field, and androecium tissue, gynoecium tissue, developing fibres, carpel walls and septe from variety Nucotton33B. The invention also relates to substantially purified proteins or their fragments encoded by nucleic acid molecules of the invention, and to transformed plants having a nucleic acid construct comprising a nucleic acid of the invention. The cotton ESTs are useful as molecular tags to isolate genetic regions, to isolate genes, to map genes, to determine gene function and to determining whether genes are members of a particular gene family. The nucleic acid molecules may be used for isolating a variety of agronomically significant genes as associated with plant growth, quality, yield, and could also serve as links in metabolic and catabolic pathways. The nucleic acid molecules are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated nucleic acid molecule that encodes a plant protein or its fragment, useful for isolating a variety of agronomically significant genes associated with plant growth, quality or yield, and as molecular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to 17880 cotton expressed sequence tags (ESTs;

also useful for identifying genes important in initiating and maintaining dering that may be used to mitigate stresses encountered during seed germination. The ESTs additionally enable the acquisition of promoters and cis-regulatory elements which will be useful to express addronomically significant genes in these tissues and/or other tissues, and also permits the acquisition of molecular markers useful in breeding schemes, genetic and molecular mapping, and in cloning of agronomically significant genes in these tissues and/or other tissues, significant genes. The nucleic acid molecular apping, and in cloning of agronomically significant genes. The nucleic acid molecules are further useful for detecting the presence or quantity of a protein or mRNA and for detecting the presence or quantity of a protein by tissue printing. The present sequence represents a specifically claimed EST isolated from a sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed from the US

The invention relates to 17880 cotton expressed sequence tags (ESTS;
ACNA5220-ACN63099). The ESTS were isolated from CDNA libraries generated
CC from primed or non-primed seeds from variety DPSOB, mature seeds from
variety Coker 312 Boswell 96 Field, and androecium tissue, gynoecium
tissue, developing fibres, carpel walls and septa from variety
CC tissue, developing fibres, carpel walls and septa from variety
Nucotton33B. The invention also relates to substantially purified
comprising a nucleic acid of the invention. The cotton ESTs are useful as
comprising a nucleic acid of the invention. The cotton ESTs are useful as
comprising a nucleic acid of the invention. The cotton ESTs are useful as
comprising a nucleic acid of the invention. The cotton ESTs are useful
comprising a nucleic acid of the invention. The cotton ESTs are useful
comprising a nucleic acid of the invention, to isolate genes to members of a particular gene family. The nucleic acid molecules may be
comprising an estabolic and catabolic pathways. The nucleic acid molecules are
associated with plant growth, quality, yield, and could also serve as
clinks in metabolic and catabolic pathways. The nucleic acid molecules are
compressed germination or that may be used to mitigate stresses encountered
consected germination or that may be used to mitigate stresses encountered
consecting seed germination. The ESTs additionally enable the acquisition of
promoters and cis-regulatory elements which will be useful to expressing
consecting the acquisition of molecular markers useful for
cotton variety Nucotton318 gynoecium tissue control or mRNA and for
detecting the expression level or pattern of a protein or mRNA and for
detecting the expression level or pattern of a protein or mRNA and control and control variety Nucotton318 gynoecium tissue control or providence data for this patent did not forme to the printed
cotton variety Nucotton318 gynoecium tissue control or providence data for this patent did not forme to the printing or present expression level or p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            56 rcagerrceaacreeacecaaaccaaacaacaacreerrcriceacaacecrrraecrarcrac 115

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Description

Publication No. US20040034888A1

GENERAL INPORMATION:

APPLICANT: Liu, Jingdong

APPLICANT: Zhou, Yihua

APPLICANT: Screen, Secven E

APPLICANT: Cao, Yongwei

TITLE OF INVENTION: Nucleic Acid Molecules and Other Molecules Associated With

TITLE OF INVENTION: Dance E

APPLICANT: Cao, Yongwei

TITLE OF INVENTION: Plants and Uses Thereof for Plant Improvement

FILE REFERENCE: 38-21(53313)B

CURRENT APPLICATION NUMBER: US/10/425,114

CURRENT FILING DATE: 2003-04-28

NUMBER OF SEQ ID NOS: 73128

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Description

Sequence 1224, Application US/09640211A

Patent No. 683346

GENERAL INFORMATION:
APPLICANT: Wood, Marion
APPLICANT: Sheath, Michael A.
APPLICANT: Glenn, Matchew
TITLE OF INVENTION: Compositions and Methods for the
TITLE OF INVENTION: Modification of Gene Transcription
FILE REFERENCE: 11000.1021GUU
CURRENT APPLICANTON NUMBER: US/09/640,211A
CURRENT FILING DATE: 2000-08-16
NUMBER OF SEQ ID NOS: 2368

SOFTWARE: FeatSEQ for Windows Version 4.0

LENGTH: 532
  Modification of Gene Transcription
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     532
